FEATURES

Durability: Crystal has been designed to provide superior durability in demanding environments such as kitchen fronts, bath, or furniture.

Scratch resistance: the new lacquered Crystal finish has been particularly developed with the appropriate precautions to ensure high level of scratch resistance. The fabrication method during the production process allows us to use lacquers of great hardness.

Ultra High gloss: If there is one thing that makes Crystal really different from the other products is its ultra-high brightness, which is almost perfect. It provides modern feeling and sense of more space and light.

U.V. Lacquered: the U.V. allows to provide a high gloss finish with high hardness degree.

PROPERTIES

Feel the difference

100% Reflection

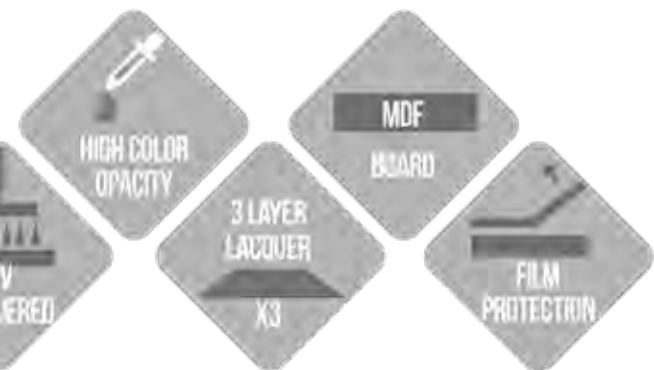

Crystal is quality: coating weights range from 180 to 250 gr/m². Crystal has been developed with supreme consciousness and intention to offer the best quality.

3 Covers Lacquer: due to 3 layers of lacquer and finish pigmentation, consistency is achieved in color, creating unified tints as well as solid and well defined colors. This pigmentation permits long-term color stability.

Made with MDF: a good substrate is the basis of a good coating, which is why we use a high-quality MDF.
